

Empowering Quality Assurance by Subduing Threats Through Life-cycle Testing

About Premier BPO:

Operational since 2003, Premier BPO is a private US enterprise that creates outsourcing solutions through a perfect blend of technology with manpower. Delivering 24/7 operational capabilities to various companies falling under the Fortune 500 flagship, we hold a dedicated clientele. Empowering business continuity with our remote-ready infrastructure, we also facilitate disaster recovery options for your company's success and growth.

Our Software Testing Services allow us to eliminate any discrepancies that may hamper your overall business performance by exposing vulnerabilities. A key component of Quality Assurance, Premier BPO's software capabilities allow you to troubleshoot in real-time, standardize procedures, review performance for risk analysis, and get top-notch threat and malware protection. We also provide customized software solutions with 24/7 tech support, to generate end-to-end results

- » **Crowdsourced testing**

Software Support by Premier BPO:

A Managed Service Provider (MSP) is a cyber-secure, cloud-based infrastructure that allows perpetual tech support with continuous system monitoring. Powered by Kaseya, an interactive client portal, MSPs are capable of delivering peak productivity with a fully certified team at the back-end. They create space for your executives to focus on your core competencies, while they remotely handle your business processes.

Providing on-demand testing services as well, Premier BPO expedites the software testing lifecycle by applying automation where applicable, with a step by step approach. Our testing capabilities include protocols, compliances, security checks, system updates, patch management, and target-oriented testing. To facilitate the present work from home dynamic, we also provide remote Software Support according to individual business models with data recovery and cloud back-ups already in place.
